

“Oxygen Under Pressure”

Some Effects of HBOT in Small Animal Veterinary Medicine

- Reduction in Swelling, Inflammation
- Reduction in Pain
- Stimulation of New Blood Vessel Formation into the Healing/Inflamed Tissue
- Reduction in Pressure and Edema caused by Head or Spinal Cord Injuries
- Improved Control of Infection
- Accelerated Wound Healing
- Stem Cell Multiplication and Recruitment to Damaged Tissue
- Bactericidal to the Lyme Spirochete (at 2.4 ATA)
- Causes Large Amounts of Oxygen to Dissolve in the Plasma
- Allows Oxygen to Reach up to 4x further into Diseased and Damaged Tissue when Compared to Oxygen Released from the Red Blood Cells

Some Indications for HBOT in Small Animals

- Pre & Post Operative Swelling
- CGI Complete Global Ischemia
- Head Trauma
- Smoke Inhalation
- Carbon Monoxide Toxicity
- Fibrocartilagenous emboli
- Immune Mediated Diseases
- Non-Healing Wounds
- Anemia
- Electric Cord Bites
- Vasculitis / Lyme Disease
- Burns
- Sepsis
- Pancreatitis
- Osteomyelitis
- Arthritis
- Spinal Trauma (IVDD)
- Septic Peritonitis
- Near Drowning/Near Hanging
- Snake Bite
- Chronic Rhinitis
- Pain Management

...and so much more!
