

# Intramuscular Chemotherapy Extravasation

## CASE STUDY – HBOT & VETERINARY MEDICINE

**Bailey**

**Pre Hyperbaric  
Oxygen Therapy  
(Within 2 Hours of  
Injection)**

**Post Hyperbaric  
Oxygen Therapy (50  
Hours Post Injection)**

### **Hyperbaric Oxygen Therapy Treatments:**

**Four (4) HBOT Treatments  
over 48 Hours**

This is a veterinarian's own dog with Lymphosarcoma. Two syringes were filled, one with Vincristine, the other with Benadryl. The veterinarian set them down to attend to something else, then picked up the Vincristine and gave it IM by mistake. Referred for immediate HBOT, no pain, swelling, or sloughing ever occurred.
